

# CASE STUDY

## Client

# QDCP

Quality Driven Custom Packaging, LLC

## Problem

QDCP was tasked with reducing inventory costs and increasing inventory control to better accommodate the company's overall financial goals.

## Solution

PSI and QDCP implemented a Vendor Managed Inventory (VMI) program. This allows PSI to warehouse and deliver QDCP's boxes in a timely and efficient manner.

By PSI having shared access to QDCP's volume forecasts and customer demand, we were able to take on the responsibility of managing their inventory and provide a "just-in-time" flow of material that matched QDCP's daily production schedule.

This program has eliminated the need for a 50,000 square foot, offsite warehouse that had a sole purpose of stocking 70% of their inventory. In taking on the warehousing responsibility, PSI provided an integrated, systematic solution that continues to save QDCP substantial overhead expenses by minimizing costs involved with warehousing rental, utilities and up-keep.

This support PSI provides continues to help QDCP stay competitive in their industry by giving them a financial edge with dependable and flexible delivery services.
